

**The Literature Review Question should be focused around the potential needs/requirements of the Nicholas Center and the future of the application**

**Examples:**

**Common questions addressed in meta-analysis are whether one treatment is more effective than another or if exposure to a certain agent will result in disease**  
**My Questions**

**Primary Question :**

- 1. What is the impact of passive technologies in predicting ‘challenging’ behaviors in the population with Autism?*

**Secondary Question :**

2. What is the impact of bio wearable technologies, and what are the reported physiological indicators (for example: continuous glucose monitoring and skin conductivity) in predicting ‘challenging’ behaviors in the population with Autism?
  - a. Are the physiological indicators aligned with the observed behaviors in the population with Autism?
3. Which human behaviors are universal (everyday functions) or specific QoL indicators
